Summary

Software Engineer with 4+ years of experience building production software across mobile, web, backend, and cloud infrastructure, with a primary focus on React Native. Experienced in React Native architecture migrations, white-label mobile platforms, full-stack product development, production deployments, and end-to-end iOS/Android delivery.

Work Experience

Wylo

Software Developer

Chennai, India

Oct 2023 – Present

- Work across mobile, web, and backend for Wylo's SaaS platform serving 200+ brands, with primary ownership of mobile development.
- Played a major role in migrating Wylo's production React Native application from the Legacy Architecture to the New Architecture, resolving dependency, native-build, and cross-platform compatibility issues across iOS and Android.
- Maintain a shared white-label React Native codebase with multiple iOS targets/schemes and Android product flavors, and ship branded applications through the App Store and Google Play.
- Develop end-to-end product functionality across mobile, web, and backend, including community features, notifications, events, payments, and native/web-integrated experiences.
- Manage production deployments and Linux infrastructure on AWS, including Nginx configuration and production troubleshooting.
- Explore and introduce AI-assisted engineering workflows to improve developer efficiency, evaluating new tools and helping the team adopt effective practices for codebase exploration, debugging, and implementation.

Wylo

Software Developer Intern

Chennai, India

Oct 2022 – Oct 2023

- Built and scaled a React and Redux web application serving 50,000+ active users.
- Owned major product features including event creation, community management, earnings dashboards, and payout preferences, while improving frontend performance and developer workflows.

ICEM Incubation Cell

Software Developer Intern

Pune, India

Dec 2021 – Apr 2022

- Built *Presence*, a React-based attendance visualization platform used by 500+ users, and mentored two interns during development.

Selected Project

Dineary

Freelance React Native Developer

dineary.com

- Developed a restaurant discovery and review application using React Native and Expo, contributing across core product flows and mobile infrastructure.
- Built location-based restaurant discovery using React Native Maps and Google Places, including map search, filters, location permissions, and clustered map experiences.
- Implemented push notifications and authentication, and managed end-to-end iOS/Android delivery from build configuration and release preparation through App Store and Google Play publishing.

Skills

Mobile: React Native, Expo, TypeScript, React Native New Architecture, Redux Toolkit, React Navigation, Expo Router, Reanimated, Hermes, React Native Maps, MMKV

Web & Backend: React, Next.js, Node.js, Express, REST APIs, MongoDB, PostgreSQL, Firebase

Cloud & DevOps: AWS, Cloudflare, Nginx, Docker, Linux, GitHub Actions, DNS, SSL/TLS

Mobile Delivery & Workflow: Xcode, CocoaPods, Gradle, iOS Targets/Schemes, Android Product Flavors, App Store Connect, Google Play Console, Git

Education

Savitribai Phule Pune University

B.E. Computer Engineering, CGPA: 9.0 / 10

Pune, India

2019 – 2023
